# Smartsheet Product Update – September 18th, 2015

New or updated features in this Smartsheet release include:

1. Find and Replace

Ctrl + f (PC) or Command + F (Mac) will now launch a Find and Replace feature within a Sheet or Report. Find and Replace works only on cell data within a sheet, you must use Search to find discussion text and Attachment names/descriptions. Ctrl + Shift + f now launches the search window from Sheet or Report.
Learn More.

2. Web Form Authorization

A new option in the Web Form setup screen lets you require respondents to log in with their Smartsheet credentials before accessing a Web Form. This will allow you to automatically track names or emails of people who have responded, instead of requiring them to enter their name/email in the form. Available to team and Enterprise Only.
Learn More.

- If user is already logged in to Smartsheet, they will enter Web Form immediately. If not, user will be asked to login and will then be directed to the webform. Note: This does not restrict access to org users only - anyone with a Smartsheet login can fill out the form
- If user doesn't have a Smartsheet account and signs up, the email confirmation link will take them to a standalone Set Password screen before directing them to the Web Form. They will not open the app after setting their password.
- If Enable Confirmation Email is checked, user's email will be pre-populated.

3. Other Enhancements/Changes

- Changed report paging limit from 100 to 500 rows to have fewer customers encounter paging when using Calendar on reports
- Enabled multiple uses of login ticket to ease the support burden caused by single-use tickets getting expired by deep-inspection security software

4. Issues Fixed

Issues Summary (updated at code freeze)
63 bugs were fixed, including these customer-reported issues:

Gantt	Export of sheet doesn't show % complete in parent rows, only child rows
Gantt	NPE on print/export to PDF in gantt view
Grid	Count in lower right shows inaccurate counts of checkboxes
Grid	Copying cell with formula whose result is a blank cell in Firefox/IE doesn't work using keyboard shortcuts
Grid	SUM in bottom right corner inaccurate with certain numbers
Reports	Copying Start/End Date controlled by dependencies in Report copies formula rather than formula results
SAML	Customers with SAML configured prior to 34-einstein cannot disable their last IdP
SAML	multiple customers are not able to enter DNS TXT records with curly braces
Update Request	Invalid update request mail gives confusing instruction about "updating" the scheduled request
Update Request	Recurring Legacy Full Sheet update request doesn't load when user updates the message in reoccurring table.
User Management	Brand new user invited to an org should not receive a "Your account has been merged..." email on accept
User Management	Unclear message when importing users into org when all users in imported CSV are active in the org.
Web Forms	Formatting not saved to database on calculated cell using Web Form data (causing data merge display issues with Smartsheet Merge)
